Responsibilities:

- Analyse data, using statistical techniques where appropriate
- Interpretation of results and communication of findings
- Work with clients to specify and design reporting solutions
- Develop and manage clients ongoing analytical requirements
- Monitor performance and quality control plans to identify improvements.
- Extract, manipulate, analyse standard and nonstandard data sets
- To assist the Account Management Team and support with Client analytics related queries
- To be involved in ad-hoc inter-departmental projects as and when required
- Prepare detailed reports for management and other departments by analysing and interpreting data

Requirements:

- Degree with significant Analytical content
- Knowledge of different statistical techniques – including Regression models, CHAID
- Intermediate/advanced knowledge of Microsoft Excel
- Able to work off own initiative
- Strong verbal communication skills
- Strong mathematical and analytical skills
- Excellent multi-tasking skills and task management strategies
- Experience in analytical role desirable
- Experience in SQL desirable
- Experience in Tableau desirable
